

## Summer Laptop Sale

With two weeks left on the optional free Windows 10 upgrade and school starting back up in six weeks, we're having a deep discount sale starting today on our stock of new laptops. If you're looking to get a deal and upgrade to Windows 10 before the free upgrade ends, check to see what stock is still available. If you're still not a fan of Windows 10 (or Windows 8), we do still have some new systems that have been factory downgraded to Windows 7 Pro.

## Summer Hours

Due to decreasing use of our Saturday hours, starting July 23rd we will be switching to an appointment-only pickup window for people unable to make it in on Fridays during the summer. If you need to pick up on Saturday, give us a call to schedule the appointment ahead of time. We're hoping to minimize any inconvenience this may cause to the people who come visit us normally on the weekends, so please let us know if there is anything we can do to improve the process and enjoy a little more of the sunshine each weekend.

## Tech Tip: Speed Up My PC!

Everyone wants a faster computer, but not everyone knows the most effective way to speed up a slow computer. There are many, many programs out there that advertise speeding up a computer but can actually slow it down or turn out to be spyware\malware. The most effective method is to have an expert clean up things that are running constantly and check the computer for heat or hardware issues that could be causing the

## Update Norton and Symantec

Symantec has been in the news recently over serious vulnerabilities found in its consumer and enterprise antivirus products.

If you're using a Norton product, update now and update frequently to make sure you have the latest versions as the flaws are fixed.

slowness, but for the DIY crowd, make sure that any program you're using for help is legit (actually helps speed up the computer) and that you make sure you have a good backup before trying anything. Legitimate cleanup programs often have advanced features that can cause issues with your computer if you clean up the wrong thing.

## Featured Upgrade: Battery Backup!

It's not something most people think about. It's not as common as the ubiquitous surge protector, but it could be one of the best investments you make for not only your computer, but also for any electronic equipment plugged into it!

A battery backup (or UPS - Uninterruptible Power Supply) will keep your electronics running (for a period of time) when your home/office loses power, so you can safely save and close your files. It can protect your investment from lightning strikes & line surges. Battery backups can also stop power-related interruptions to your networking equipment and keep you connected during a crisis.

Contact us as 269-548-8324 for more info on how to protect your equipment!

### Last Week on the Blog:

#### ***Your Password - The First Line of Defense***

"It's really not possible to overemphasize the importance of having secure, unique passwords for all of your online accounts. Your password is the one item regarding the security of your data and online persona that you have 100% control of." [\[More...\]](#)

### Next Week on the Blog:

#### ***Productivity For Your Tablet***

"The computer is still the "king of the castle" when it comes to productivity, but more and more people are turning to mobile devices out of necessity or just because it's more convenient than pulling out the laptop. "
